Art Unit: 3765

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-14, drawn to a material, classified in class 428, subclass 156.
 - II. Claims 15-23 and 26-29, drawn to a glove and method of fabricating a glove, classified in class 2, subclass 160.
 - III. Claims 24 and ~~25~~, drawn to a material with glass particles, classified in class 428, subclass 221.
 - IV. Claim 25, drawn to a method of fabricating a material including curing and coating, classified in class 427.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the material of invention I could be used to make any number of articles including other forms of apparel or protective coverings.
3. Inventions III and IV are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the product as claimed could be made by fusing or spraying the glass particle layer to the substrate and drying the substrate in an oven.

Art Unit: 3765

4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
